Career Trends

Food Scientists

Food scientists are the brains behind the food we eat: the work these scientists do keeps flavors fresh, foods nutritious and safe to eat. Some food scientists work with raw food sources; others test products to verify ingredient and nutritional contents; some are engaged in regulatory and compliance activities, ensuring that health and safety standards are maintained; and others might be researching new food preservation, processing or packaging techniques. Whether working in the public or private sector, food scientists use chemistry, math, microbiology and engineering applications in their work.

Earning

\$35k-\$100k

Education Requirements

4-Year College or University

2-Year College or Technical Training

Communications Specialists

Communications specialists help organizations explain their actions, policies and outcomes. Essentially, these professionals are responsible for crafting a message and then sending it out to either a general or targeted audience. These audiences could represent internal stakeholders, such as employees and board members; or external members of the general public. Communications specialists are increasingly using technology and social media applications to facilitate the delivery of their messaging. As such, professionals that work in this career must have the ability to develop and package content for different mediums. Project and time management, budgeting, planning and coordinating special events are additional skill sets that are connected to this career.

Who we are.

Angus Young Associates (AYA), Inc. is a full-service architectural, engineering and interior design firm providing high quality design solutions, construction documentation, bid management and construction services. Registered architects, engineers, and interior designers carry out the development of all projects. Our team's involvement starts during the initial development of the design and then continues through the completion of construction. With its corporate office in Janesville, AYA has supported various organizations and their related initiatives throughout Rock County.

Who we hire.

The services that we provide requires our staff to work together in an efficient and collaborative manner. This approach requires us to have a team that is well-rounded; with people who are team players; and staffed with professionals (e.g. architects, engineers, project managers, etc.) that are able to see the big picture, not just their specific subject matter discipline.
